

A BASE ON THE MOON

Science book for children

The Moon is our satellite and the only celestial body we've set foot on, and it could well become the door to the rest of the Solar System.

The authors who brought us *A City on Mars* will take us on a journey from the Moon's origins to its possible futures. We'll find out how it was formed, how it became the goal at the heart of the Space Race, what would happen to Earth if the Moon wasn't there, and how it might – in a not-so-distant future – become a base from which we could start to explore the rest of our Solar System.

Details

Authors: Eduard Altarriba i Bigas,

Guillem Anglada-Escudé,

Sheddad Kaid-Salah Ferrón,

Miquel Sureda Anfres

No. of pages: 56

Dimensions: 245 x 315 mm

Colour: Full colour throughout

Age Range: 8+
